

WEBARA STUDIO × ZEERA

BUILD PROPOSITION / GHANA

Build Zeera for Ghana.

A serious, locally integrated sportsbook experience — with Webara Studio building the digital operating layer around Zeera's identity.

Confidential discussion document
Prepared for the Zeera team · July 2026

GHS / MoMo / GPL

THE PROPOSITION

Not another betting skin. A Ghana-ready operating layer.

Zeera can retain the quality of an international sportsbook while giving Ghanaian customers a faster, clearer and more trusted local experience.

“The front end, local integrations and customer relationship should belong to Zeera — not disappear inside a generic white-label product.”

WEBARA STUDIO OPERATING PRINCIPLE

Local money

MoMo-first deposits, verified-number withdrawals and GHS wallet clarity.

Local relevance

English, Twi and Ga, GPL and selected boxing where coverage is reliable.

Local growth

Referral-led social distribution controlled through Zeera's own programme.

WHAT THE CUSTOMER SHOULD FEEL

Fast to enter. Clear when money matters.

The differentiator is not simply the number of markets. It is the quality of the entire journey from phone number to payout.

01 / ACCESS**Open Zeera**

Phone-first registration, age gate and friction-light KYC.

**02 / FUND****Deposit by MoMo**

GHS wallet, push confirmation and immediate status feedback.

**03 / BET****Choose with confidence**

Fast odds, readable markets, transparent stake and potential return.

**04 / SHARE****Invite your people**

Social bet slip, referral code and campaign attribution built in.

**05 / WITHDRAW****Get paid cleanly**

Verified-number payout, reconciliation and clear settlement history.

The experience is designed around trust, not friction disguised as engagement.

WHO BUILDS WHAT

Webara builds the layer Zeera owns the relationship.

A disciplined split avoids pretending one supplier can do everything — and gives Zeera control of the parts that create local advantage.

WEBARA	Front end, wallet experience, local language, social sharing, referral programme and local configuration.
PARTNER	Odds, orderbook/liquidity, managed trading, risk, sports data and settlement services.
PSP / KYC	Payment rails, identity verification, AML screening and regulated service components.
ZEERA	Brand, licence, customer relationship, commercial decisions, support and operating governance.

The strategic advantage

Zeera is not locked into a supplier's generic user interface. Webara creates an integration layer that allows Zeera to improve, localise and change components over time.

THE WEBARA BUILD

We build what makes Zeera feel like Zeera.

A branded, modular digital layer connecting the customer to the regulated sportsbook infrastructure underneath.

Customer front end

- Responsive web app
- Mobile-first navigation
- Home, live, markets, bet slip
- Wallet, wagers and notifications

Integration connectors

- Sportsbook/orderbook API
- Payment processor APIs
- KYC/AML services
- Webhooks and reconciliation

Local growth engine

- English / Twi / Ga
- Social bet-slip sharing
- Referral codes and attribution
- Campaign and bonus controls

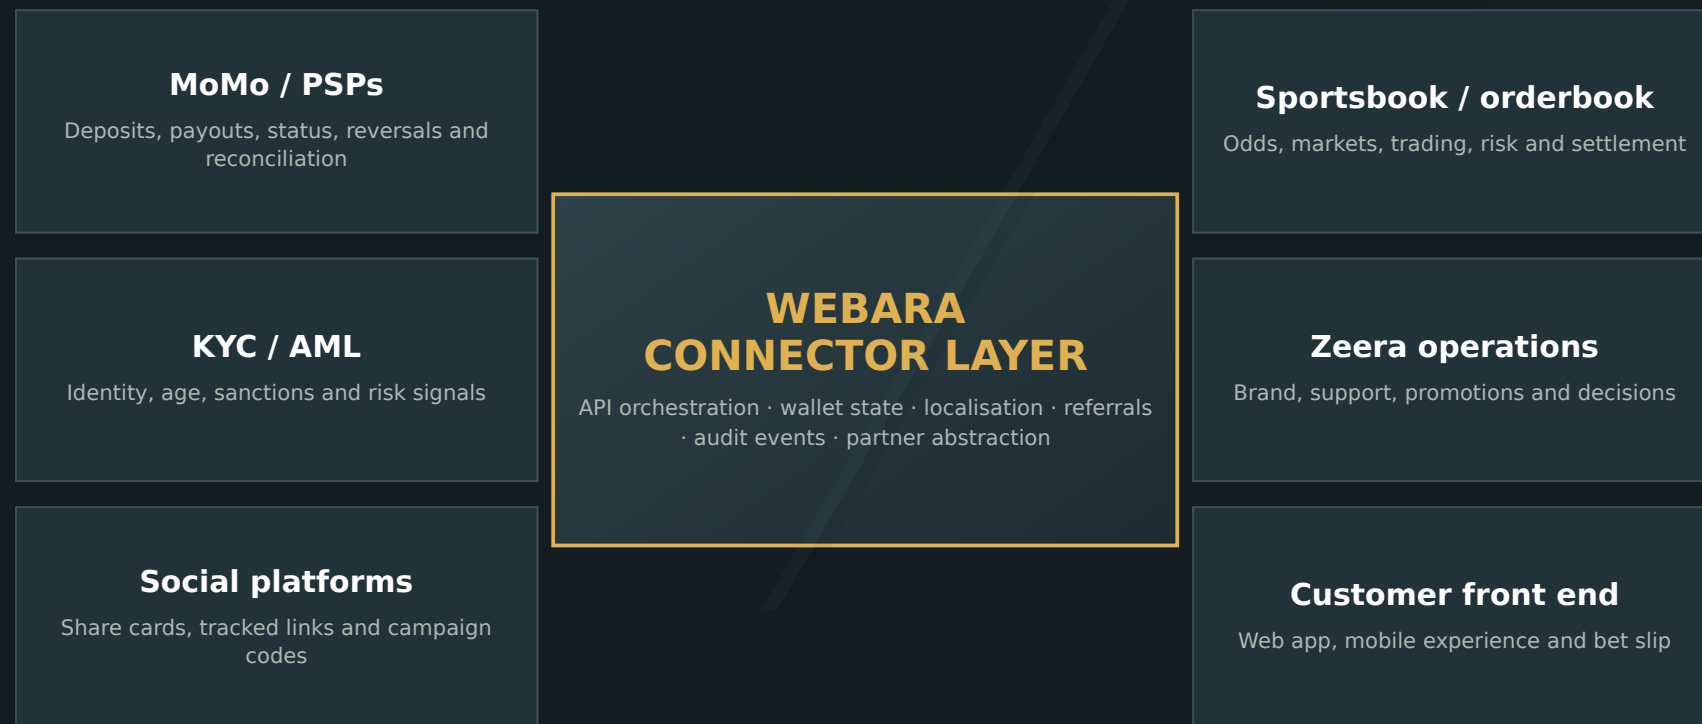

Operations console

- User and wallet view
- Payment status
- Referral reporting
- Support and dispute tools

THE INTEGRATION MODEL

A clean connector layer between Zeera and its partners.

Webara keeps the customer-facing product coherent while external specialists provide the regulated or data-intensive services behind it.

The architecture is designed to reduce supplier lock-in and make future partner changes manageable.

LOCALISATION IS PRODUCT STRATEGY

Small details create commercial trust.

01 MoMo is the default behaviour

Deposit and withdraw through familiar Ghanaian rails, with verified numbers, clear statuses and GHS-first wallet language.

02 Twi and Ga are not decorative toggles

Translate navigation, payments, errors, support, promotions and responsible-gaming content with human review.

03 GPL stays focused

Prioritise reliable fixtures, markets, settlement and live coverage over a catalogue of poorly supported local leagues.

04 Boxing is coverage-led

Add local boxing only where the partner can name the events, markets, pricing, rights and settlement process.

05 Referrals are an owned asset

Every social share and code should feed a Zeera-controlled attribution and campaign system.

BUILD BEFORE SCALE

A phased route from integration to traction.

The first milestone is not a large feature list. It is a dependable, testable operating core.

PHASE 01

Partner & compliance design

Confirm Ghana operating model, sportsbook partner, PSP routes, KYC/AML providers, data flows, responsibilities and commercial terms.

PHASE 02

Core build

Build front end, wallet states, authentication, connector layer, language framework, referral engine and operations console.

PHASE 03

Sandbox & pilot

Test deposits, withdrawals, KYC, odds, settlement, failures, limits, referrals and support workflows before controlled launch.

PHASE 04

Market activation

Launch with a focused sports catalogue, creator/referral partnerships and measured customer acquisition. Improve from real usage.

Build the rails first. Then turn on the growth.

WHAT WE NEED FROM THE INFRASTRUCTURE PARTNER

We will not choose a partner on a logo alone.

Coverage

International football, GPL and named boxing coverage where requested.

Trading

Clear distinction between odds feed, managed trading, risk and actual exposure.

Payments

Written confirmation of Ghana MoMo and GHS collection/payout routes.

Compliance

Age, KYC, AML, responsible gaming, audit access and regulator cooperation.

Integration

API, sandbox, webhooks, uptime, latency, incident response and data export.

Commercials

Setup, minimums, revenue share, reserves, term, exit and all hidden charges.

Webara will lead the technical and product diligence. Zeera retains the commercial and regulatory decision.

WHY THIS PARTNERSHIP

Webara brings the build discipline Zeera brings the identity.

A serious product does not outsource its customer experience by accident.

Webara is prepared to take responsibility for the difficult middle: turning supplier APIs and Ghanaian payment realities into one coherent product that customers can trust.

Commercially minded

We prioritise the smallest build that can operate reliably and generate learning.

Locally deliberate

We design for Ghanaian payments, language, infrastructure and behaviour from the start.

Modular by design

We keep the front end, connectors and referral data under Zeera's control.

Execution-led

We build, test, document and operate — not just produce slides.

THE PROPOSED NEXT STEP

Let's turn the mock-up into a **real operating plan.**

We propose a working session with the Zeera team to confirm the product ambition, operating model and partner route — then move into a scoped discovery and build phase.

01 Confirm the Zeera vision

Agree what must feel uniquely Zeera in Ghana.

02 Select the infrastructure path

Shortlist the sportsbook, trading, payment and KYC partners.

03 Approve the Webara build scope

Move from concept to architecture, prototype and delivery plan.

Webara Studio × Zeera

Build the local layer. Integrate the right rails. Protect the Zeera relationship. Launch with discipline.
